

Amendments to the Specification:

Please add the following new paragraph on page 3, after the paragraph beginning with, “Fig. 5.”

Fig. 6 shows a top view of a non-circular path, and in particular, a polygon with n corners.

Please replace the paragraph on page 14, beginning with “In a fourth modification...” with the following amended paragraph:

In a fourth modification, shown in Fig. 6, wherein the reference characters refer to the same elements of the invention shown in Fig. 4, the building containers do not rotate with respect to an axis of rotation 3. Instead, a guiding drive 27 only leads the building containers on a closed, not necessarily circular path synchronously around the axis of rotation 3. If the device has n, material application devices and n solidification regions, the path preferably corresponds to the boundary of a polygon with n corners optionally each building container additionally rotates on its path around the axis or rotation 3 around an axis of rotation 3', which is parallel to the axis of rotation 3 and which goes through the building container.
